## **Data Centers Delivered Named to 2014 CRN Data Center 100 List**

**NEW YORK (March 10, 2014)** – [Data Centers Delivered](http://www.datacentersdelivered.com), a provider of custom modular data centers, today announced that it has been recognized in the 2014 CRN Data Center 100 annual list featuring technology vendors whose solutions are vital for powering today's data center. CRN developed the list to help solution providers navigate the marketplace and identify the top companies and technologies across the data center to best meet their needs as they build solutions for their customers.

Compiled annually by CRN's editorial staff, the list honors 20 companies in five categories that demonstrated expertise in their respective fields and consistently pushed the boundaries of what's possible in data center construction, infrastructure, security, cloud and storage. The five categories include: Infrastructure Providers, Data Center Tools Providers, Designers and Builders, Service Providers, and Virtualization Providers.

Named a winner in the Designers and Builders category, Data Centers Delivered was honored for its work with customers to provide the best of both worlds – the predictability, customization, larger size, flexibility and aesthetics of a field-built data center facility with the speed, and cost-containment of a containerized data center.

“Staying ahead of the data boom necessitates working with the most capable minds in the industry who understand how the modular data center market is constantly evolving and are passionate about innovating solutions for the challenges ahead,” said Stephen Madaffari, Principal, Data Centers Delivered. “We are honored to be recognized by CRN and included among this esteemed group of data center contributors.”

Coverage of the Data Center 100 is featured in the February/March issue of CRN, and online at [www.CRN.com](http://www.CRN.com).
