Data Centers Delivered Awarded Contract by Telx for Pre-Fabricated Mechanical Infrastructure

NEW YORK (June 25, 2014) – [Data Centers Delivered](http://www.datacentersdelivered.com), a provider of modular data centers, today announced the company has completed a contract awarded by Telx®, a leading provider of global interconnectivity, cloud enablement services and datacenter solutions, to install a pre-fabricated, modular mechanical system as part of their core infrastructure plan in Clifton, New Jersey. The terms of the contract were not disclosed, but Data Centers Delivered has successfully shipped and installed the system.

“The ability to provide mechanical infrastructure needs to customer specifications and do it in a time-efficient manner has completely changed the rules of the modular data center construction game,” said Stephen Madaffari, Principal, Data Centers Delivered. “Modular, pre-fabricated solutions such as those provided by Data Centers Delivered allow customers to address their data needs with more predictability, translating to higher bottom line savings.”

Powered by Epsilon Industries, Data Centers Delivered offers customers the best of both worlds – the predictability, customization, larger size, flexibility and aesthetics of a field-built data center facility with the speed, and cost-containment of a factory-built product.
