Data Centers Delivered Named to CRN Data Center 100 for Second Consecutive Year

Annual list recognizes technology vendors that power, support and protect today's data centers through channel partners

NEW YORK (Feb. 11, 2015) – [Data Centers Delivered](#), a provider of modular data center solutions, has been recognized in The Channel Company's annual CRN Data Center 100 list, featuring technology vendors whose solutions are vital to today's data centers. Selected by the CRN editorial staff after months of in-depth research and nominations from solution providers, each vendor on the Data Center 100 list is recognized for providing channel partners with an opportunity to grow their business by offering cutting-edge products and services to their customers.

Data Centers Delivered offers customers a full suite of modular data center solutions including: prefabricated mechanical and electrical systems, containerized data centers, and customized built-to-suit data centers. The company recently announced in January their entry into the standardized data center product design market positioning Data Centers Delivered to pursue different high-growth areas such as high performance computing, healthcare, and the public sector.

The companies included in CRN's Data Center 100 list were chosen based on a variety of criteria, including the types of technology and services they make available to partners as well as their overall impact on the market and the channel. This year's list honors vendors in five data center technology categories: Infrastructure Providers, Tool Providers, Virtualization Vendors, Service Providers, and Designers and Builders.

"As the data center industry continues to evolve, Data Centers Delivered is dedicated to evolve with it and committed to develop innovative modular designs that meet our customer's needs," said, Stephen Madaffari, principal, Data Centers Delivered. "We are honored to have our passion, dedication and hard work recognized by CRN for a second year."

“The Data Center 100 list focuses on the contributions of those vendors whose technologies enable the channel partner community to strategically and profitably drive greater innovation, efficiency and productivity in the data center,” said Robert Faletra, CEO, The Channel Company. “At the helm of these leading-edge companies are forward-thinking executives who are envisioning and architecting the data centers of tomorrow. We applaud their accomplishments and anticipate their continued contributions to our dynamic industry.”

Coverage of the Data Center 100 will be featured in the February 2015 issue of CRN and online at www.CRN.com.
